## Articles

- 2025 **A transcendental non-Archimedean Calabi–Yau Theorem with applications to the cscK problem**, *preprint*, arXiv:2509.09442  
Description: We solve the non-Archimedean Monge–Ampère equation for compact Kähler manifolds, generalizing a result of Boucksom–Favre–Jonsson to the transcendental setting. This allows us to derive a valuative criterion for uniform K-stability for models. As a central application, we prove that this stability condition implies the existence of a unique constant scalar curvature Kähler metric.
- 2024 **A non-Archimedean theory of complex spaces and the csc-K problem**, *published*, Advances in Mathematics  
Description: In this paper I construct a space of valuations attached to a compact complex manifold, that generalize the Berkovich analytification of a projective variety over  $\mathbb{C}$ . As an application I get a sufficient algebraic condition for the existence of constant scalar curvature Kähler metrics on a given Kähler class on a Kähler manifold.
